

Tromp Group develops and produces integrated systems and best-in-class technology for the bakery industry. The group consists of two brands: Tromp Sheeting & Depositing Systems and Den Boer Baking Systems. Tromp Group is a Markel Food Group company. Together with leading brands AMF Bakery Systems and Reading Bakery Systems, the Group offers a wide and growing portfolio of automated food production solutions. Tromp Group customers worldwide can count on the international know-how and local support of the Markel Food Group. The focus is on the following product groups:

Sheeted Breads • Pizzas • Cake & Muffins • Pastry & Laminated Doughs • Pies • Waffles

Quality Engineer

Bunschoten

Bachelor or master's degree in mechanical or electrical engineering? Help us build the best in class production lines in the bakery industry! By intensive elaboration with the bakers in the industry, our machines are the result of years and years evolution. Now it is time to build the next-generation production lines by improving the value (functionality divided by cost) of our machines, using the latest knowledge in mechanical construction design principles. Help us to build a 'great place to work'-organization, where the best engineers build the best in class machines!

What are you going to do?

You are responsible for direct technical support of forward model engineering projects, the creation, review, and approval of engineering documentation, process and hardware verification/validation support, and the implementation of systemic improvements. Develop and communicate quality measures within the module in line with Quality, company and corporate objectives. Supporting the planning and execution of improvement programs within the module using a structured approach to achieve the objectives. Identify and drive the resolution of internal and external quality issues through ownership and use risk processes. Provide hands on technical and quality system support for new product introduction, projects, including hardware and software products. Where necessary, work with suppliers to improve and sustain quality improvements. Routinely compile and report key quality metrics data to multiple organizational levels. Support Manufacturing Operations in efforts to drive process improvement and on time delivery. Lead internal audits. Coordinate with Sales, Engineering, Purchasing and Manufacturing to resolve both internal and external customer complaints.

What do we ask from you?

You have a bachelor or master's degree in mechanical or electrical engineering and 5 years of experience on a medior level. Expert in root cause analysis and implementing sustainable processes. Proficient with statistical software packages. Experience in managing/leading projects. Mastery of a variety of MBS tools such as Problem Solving, Fish Bone, 8D, Fault Tree, FMEA, etc. Customer focus and understanding of production deadlines. Ability to read prints and use gauges. Experience with verifying and inspecting parts. Basic math skills, experience with 8D Root Cause Corrective Action, experience with Fish Bone Analysis. Able to use Fault Trees and other quality tools. Facilitate Problem Solving techniques. Experience with FMEA.
